**Perfect Finishing
for
Plastics!**

Environment - Quality - Savings

APPLICATION

The **SIMPLE-PAINT SYSTEM** can be used with

- all mixed-air and air-mix non electrostatic spray guns (high or low pressure)
- all water- and solvent-based paints
- all manual and automatic systems

WHY USE SIMPLE-PAINT?

“**Rubbing**” of the paint against the inside of the gun nozzle and then on the workpiece during the painting process produces “**static electricity**” (which impedes perfect application of the paint)

THE SIMPLE-PAINT SYSTEM

- treats the air used by the gun
- removes oil and other impurities
- **eliminates the static electricity** that builds up in the gun (by “deionising” the air)
- improves and facilitates transfer and deposit of paint on the workpiece

IMPORTANT

- **EASY TO APPLY!**
- **RAPID INSTALLATION** (just 1 day)!
- **IMMEDIATE RESULTS!**

ADVANTAGES

- **SAVINGS ON PAINT**
- **BETTER THICKNESS UNIFORMITY**
- **ORANGE PEEL REDUCTION**
- **REDUCTION OF "PARTICLES" ON THE OBJECT**
- **REDUCTION OF REJECTS ARTICLES**
- **LESS PAINT DISPERSION**
(less over-spray and paint "rebound")
- **LESS MUD - SLUDGE**
(less soiling in spray booths)
- **REDUCTION OF SOLVENT**
- **REDUCTION OF POLLUTION**
